

Ex.No: 11

**Study of Windows OS Vulnerabilities and Exploit Modules
Using Metasploit Framework**

AIM:

ALGORITHM:

PROCEDURE:

Step 1 — Open Terminal

Open the terminal on the machine where Metasploit is installed.

Step 2 — Start Metasploit

Type:

`msfconsole`

The Metasploit console opens:

msf6 >

Step 3 — View Help

Type:

help

This displays commonly available Metasploit commands.

Students can understand commands such as:

search → Search modules

info → Display module information

show → Display available items/options

back → Return from selected module

exit → Exit Metasploit

Step 4 — Search Windows Exploit Modules

Type:

search type:exploit platform:windows

Metasploit displays Windows-related exploit modules available in the installed framework.

Conceptually:

Metasploit

↓

Search

↓

Windows Platform

↓

Exploit Modules

↓

List of Results

Step 5 — Study a module

Choose one module from the search results only for inspection.

You can display its information using:

info <module-name>

For example, use the exact module path shown by your own search results.

Step 6 — Observe Module Information

Study details such as:

Module Name

↓

Description

↓

Windows versions/services affected

↓

References

↓

Targets

↓

Required Options

This helps students understand what vulnerability the module relates to and what information would be required in an authorized security assessment.

Step 7 — Study available options

After selecting a module for inspection, use:

show options

Students may encounter fields such as:

RHOSTS

RPORT

TARGET

At this stage, they only need to understand what these parameters represent. There is no need to configure a real target or execute the exploit for this study experiment.

Step 8 — Return to Main Console

Type:

back

Step 9 — Study More Modules

Repeat:

search type:exploit platform:windows

and inspect a few different modules to understand that Windows vulnerabilities can affect different services and software components.

Step 10 — Exit

After completing the study:

Exit

SIMPLE FLOW:

RESULT:
